Subject: daily status update
Date: Sunday, April 5, 2020 4:24:29 PM

I don't think I really have anything to report other than I've been spending another Sunday geeking out building formulas and working on the online protocols. All the currently built (and all future protocols) have built-in calculations for weight-based medication dosages. At the beginning of the "medic" section, you can enter the patient weight or select the pediatric age, and all the medication doses will be updated. For example, check out Supraventricular Tachycardia (<http://ozarksems.com/protocol-2-858.php>) and try it out to get your Cardizem dose or pediatric Adenosine dose.

I'm not the only one geeking out today. I'll let Bob Anthony share his project from today, if he feels like it.
