

**Theron Becker** 15:32

Several things from today:

- The infectious disease protocol was reviewed and only slight updates with current CMH and CDC policies. <http://ozarksems.com/protocol-2-330.php>. Some clarifications on when to wear what level of PPE are in the attached image from this protocol.

Within 6 ft of anyone: Surgical mask

Patient is present: Surgical mask and eye protection

COVID patient or high-risk procedure: Scott mask

Inside LTC facility: N95 and eye protection

- Managers, safety officer, and chiefs got together this morning and developed a policy to guide us if we start having to quarantine staff and reduce ambulance coverage. Review the new policy here: <http://ozarksems.com/protocol-1-700-88.php>
- Clarification from infection control also happened today for pre-hospital questions. If an employee tests positive for COVID, they cannot return to work until they are symptom-free for five days AND greater than ten days since onset of symptoms AND greater than ten days since the positive test. When the employee returns, there are no greater restrictions than what all employees currently have.
